

20 CYBER STATISTICS You Should Know

Today, almost all the information and data in the world is stored and accessed digitally.

However, in addition to the extraordinary possibilities the Information Age has brought about, it has also given rise to the emergence of dangerous and wildly successful global cybercrime syndicates.

WHY CYBERSECURITY SHOULD BE YOUR TOP PRIORITY

Global cybercrime costs are expected to reach

\$10.5
trillion
annually by 2025.¹

The average time to **identify a breach** in 2020 was **228 days**.³

Only **24%** of cybersecurity pros surveyed **focus on prevention strategies**.⁴

The total number of records compromised in 2020 **exceeded 37 billion** — a 141% increase compared to 2019.²

Experts estimate **ransomware attacks** to hit businesses **every 11 seconds**.⁵

86%

of breaches were caused by malicious attacks with financial motivations.⁶
